Sono Primo
Jump-start to success

Communication for the "here and now"

Situational communication with core vocabularies, social scripts, visual scenes and more for emergent communicators.

Path to future growth

Sono Primo allows young users to set off on the path to success from the very beginning of an AAC intervention. Start with the simple S32 and proceed to a cutting edge Tobii Dynavox dynamic display device. Or you can start directly with a versatile SGD based on Tobii Dynavox Communicator. Sono Primo offers the right language and entertaining activities for emerging communicators in both cases, on static and dynamic display solutions.

Situational communication

Sono Primo addresses a carefully selected set of communicative situations within a child's typical world of experience. Within each context, there is a broad variety of pre-programmed content that allows for a quick start towards meaningful communication. The rich material makes it easy to create lively interactions through joined activities and allows for a playful approach to exploring communicative roles, coach participation and model language use.

Appropriate language levels

Leading research on AAC and best-practice experiences suggests that the different developmental stages of AAC users should be matched by multiple language representation and interaction forms*. Sono Primo for Communicator offers this through:

- Pages of core vocabulary and situational words represented as single symbols
- Social scripts with different levels of complexity
- Visual scenes providing full context information
- Hybrid scenes that build connections between context and single icons
- Storybooks related to the situations
- Fun activities for exploring vocabulary

Quick setup and customization

A situational communication approach requires a highly flexible communication aid. With Sono Primo for Communicator, this is provided through the new Sono Primo Control Center. The control center allows swift pre-selection of activities, quick changes to the visual appearance or switching to message collection mode.

Further customization is easy and does not require any programming skills. Sono Primo allows for quick changes of words and even the creation of template-based contexts.

A natural voice

One important Sono Primo feature is the use of recorded children's voices. Studies show that the needs of emerging AAC users differ from many of the ideas that verbal adults have and that the natural voice of a child offers superior learning efficiency over synthetic speech. Experience this efficiency and lead your users into successful communication!

System requirements

Tobii Dynavox Sono Primo requires Tobii Dynavox Communicator 4.5 or higher and a MyTobii P10, Tobii C8, C12 or C15. Tobii Dynavox Sono Primo also runs with Tobii SymbolMate 1.1.0200 or higher and a Tobii S32.

* Janice Light, Kathryn Drager, David Beukelman, Mary Anne Romski, Rose Sevcik and others.

We believe that everyone has the right to live their life to the fullest. Wanting to help people do just that, we provide them with the tools to communicate, become independent and do what they once were able to do or never thought possible.
